

Carbon Reduction Plan

Traffic & Safety Management Limited is committed to achieving Net Zero Emissions by 2050.

From our Environmental Impact Assessment, we are aware of the business activities that produce Green House Gases and the impact that generating such emissions has on our community and the wider environment.

Our Carbon Reduction Plan sets out the strategies we have adopted to fulfil our ongoing commitment to the management and reduction of our business-related carbon emissions.

The plan sets out the baseline information collected in 2024, and based on this information, setting clear targets for reducing Greenhouse Gas (GHG) emissions over key timeframes and listing our planned projects to achieve carbon net zero by 2050.

While some of these achievements will be achieved through behavioural change, it is noted that, where capital expenditure is needed, it will be accessed to take these projects to the right outcome.

The points below show the targets we have set:

Reduce GHG emissions by 70% by 2035 based on the 2024 baseline

Scope 1 GHG baseline emissions were 892 tonnes in 2024

Scope 2 GHG baseline emissions were 0.31 tonnes in 2024 (kWh usage for Gloucester & Oxford not available).

It is our objective to identify Scope 3 emissions by the end of 2027, which will set our baseline emissions under this scope.

Staff training and behaviour change projects are being identified that will assist in achieving net zero emissions by 2050
